

Solenoid Driver

KFD2-SLD-Ex1.13100

- 1-channel isolated barrier
- 24 V DC supply (Power Rail)
- Logic input
- Output 100 mA at 13 V DC
- Alternating outputs for the operation of solenoids with 2 coils
- High output power for IIB gas group
- Line fault transparency (LFT)
- Test pulse immunity
- Up to SIL 3 acc. to IEC/EN 61508

SIL 3

Function

This isolated barrier is used for intrinsic safety applications. The device supplies power to solenoids, LEDs and audible alarms located in the explosion-hazardous area. The device has 2 alternating outputs, in order to be able to operate a valve with 2 coils. If both inputs are energized, then only output 1 is energized. The device is immune to the test pulses of various control systems. The line fault transparency function can display a line fault in the field by a change in impedance at the switching input of the solenoid driver. A fault is signaled by LEDs and a separate collective error message output.

Application

Device function with 2 alternating outputs

The device has 2 alternating outputs, in order to be able to operate a valve with 2 coils. The table shows the behavior of input to output in relationship with the alternating outputs.

Input 1	Input 2	Active output
High signal	Low signal	Output 1
Low signal	High signal	Output 2
High signal	High signal	Output 1
Low signal	Low signal	No output

Input current setting

For DO cards that require a minimum load, the input current can be adapted via an external resistor. The device has an auxiliary terminal at each input for connecting the external resistor.

For example

The minimum load of the DO card is 20 mA. Subtract the input current of the isolator from the minimum load of the DO card. This results in $20 \text{ mA} - 6 \text{ mA} = 14 \text{ mA}$. In this case, create a bypass with 14 mA. With an output voltage of the DO card of 24 V, this results in 1714Ω . The suitable external resistor R_{ext} is 1.5 k Ω /1 W.
