Data Sheet

Solenoid valve Type **EVR 2 - EVR 40**

Version 2

EVR is a direct or servo operated solenoid valve suitable for liquid, suction, and hot gas lines with most refrigerants, including flammable refrigerants.

EVR valves and coils are sold separately.

Features

- Complete range of solenoid valves for refrigeration, freezing and air conditioning plant
- Supplied in versions normally closed (NC) and normally open (NO) with de-energized coil
- Wide choice of coils for AC and DC
- Suitable for most refrigerants, including flammable refrigerants
- Designed for media temperatures up to 105 °C
- Flare connections up to 5/8 in
- Solder connections up to 2 1/8 in
- Extended ends on solder versions make the installation easy, eliminating the need to dismantle the valve when soldering in
- Available in flare, solder and flange connection versions

Functions

Function

EVR solenoid valves are designed on two different principles:

1. Direct operation
2. Servo operation

1. Direct operation (NC)

EVR 2 – EVR 3 are direct operated. The valves open directly for full flow when the armature (3) moves up into the magnetic field of the coil.

This means that the valves operate with a minimum differential pressure of 0 bar. The seat plate is fitted directly on the armature (3) see [Design and material](#).

Inlet pressure acts from above on the armature and the valve plate. Thus, the inlet pressure and spring force act to close the valve when there is no current in the coil.

2. Servo operation (NC)

EVR 4 – EVR 22 are servo operated with a "floating" diaphragm (4) see [Design and material](#). The pilot orifice of stainless steel is placed in the center of the diaphragm. The seat plate is fitted directly to the armature (3) see [Design and material](#). When there is no current in the coil, the main orifice and pilot orifice are closed. The pilot orifice and main orifice are held closed by the armature spring force and the differential pressure between inlet and outlet sides.

When current is applied to the coil, the armature is drawn up into the magnetic field and opens the pilot orifice. This relieves the pressure above the diaphragm, i.e. the space above the diaphragm becomes connected to the outlet side of the valve.

The differential pressure between inlet and outlet sides then presses the diaphragm away from the main orifice and opens it for full flow. Therefore a certain minimum differential pressure is necessary to open the valve and keep it open. For EVR 4 – EVR 22 valves the minimum differential pressure for safe operation is 0.03 bar.

When the current is switched off, the pilot orifice is closed. Via the equalization holes in the diaphragm, the pressure above the diaphragm rises to the same value as the inlet pressure and the diaphragm closes the main orifice.

EVR 25, EVR 32 and EVR 40 are servo operated piston valves. The servo piston (16) see [Design and material](#) with sealing face closes against the valve seat by means of the differential pressure between inlet and outlet side of the valve and the force of the compression spring. When the coil is switched on, the pilot orifice opens. This relieves the pressure on the piston spring side of the valve. The differential pressure will then open the valve. The minimum differential pressure for safe operation is 0.2 bar.

EVR (NO) has the opposite function to EVR (NC), i.e. it is open with de-energized coil. EVR (NO) is available with servo operation only.

2.1. Bi-flow operation

Bi-flow operation with EVRC EVRC is a servo operated solenoid valve with a special diaphragm with built-in non-return valve. The valve is for use in liquid lines in refrigeration plants.

EVRC allows flow in both directions and can be used in liquid lines in refrigeration plants with hot gas or gas defrost.

During the refrigeration period EVRC works as a normal solenoid valve, while during defrost it allows the condensed liquid to return to the liquid manifold.

During the defrosting period the coil for EVRC must be energized.

2.2. Manual stem operation for EVR 6 - EVR 25 NC

EVR 6 - EVR 25 NC are available with optional manual stem operation to manually force the NC valve open when the coil is de-energized.

Solenoid valve, Type EVR 2 - EVR 40

The protective cap should be removed and the manual stem (12) **Design and material** should be rotated until the valve is fully open. It takes approx. 6 cycles from fully closed, to reach the fully open position.

After manual operation is completed, the valve should manually be closed again and the protective cap mounted.

i NOTE:

Alternatively, all EVR NC and NO valves can be manually operated by removing the coil and force the valve open or closed by using a solenoid valve tester (permanent magnet) code no. 018F0091.

Media

Refrigerants

R1234yf, R1234ze(E), R125, R134a, R152a, R22, R290, R32, R404A, R407C, R407F, R407H, R410A, R413A, R417A, R422A, R422B, R422D, R438A, R422A, R422B, R422D, R438A, R442A, R444B, R447A, R447B, R448A, R449A, R449B, R450A, R452A, R452B, R454A, R454B, R454C, R455A, R463A, R507A, R512A, R513A, R513B, R515A, R515B, R516A, R600, R600a.

For a complete list of approved refrigerants, visit store.danfoss.com and search for individual code numbers, where refrigerants are listed as part of technical data.

NOTE:

Special note for R1234yf, R1234ze, R152A, R290, R32, R444B, R452B, R454A, R454B, R454C, R455A, R516A, R600 and R600a: This product is validated in accordance to ATEX, ISO 5149, IEC 60335-2-24, IEC 60335-2-40 and UL. Ignition risk is evaluated in accordance to ISO 5149 and IEC 60335.

The EVR 2 – EVR 22 with solder connections and without manual stem can be applied on systems with R1234yf, R1234ze, R152A, R290, R32, R444B, R452B, R454A, R454B, R454C, R455A, R516A, R600 and R600a as the working fluid.

EVR 2-15 flare connections are only approved for A1 and A2L refrigerants

NOTE:

Excluded from this EVR 22 with connections 1 3/8 inch / 35mm related to PED requirements.

The EVR 2-EVR 40 versions with solder and flare connection and without manual stem can be applied to oil-free systems : R1234ze(E)

EVR 2 - EVR 22 versions with solder and flare connections and without manual stem can be applied to oil-free systems R513A, R515B, R516A

NOTE:

EVR 2-22 (R516A) and EVR 2-40, R1234ze:

- Excluded from this EVR 22 - EVR 40 with connections 1 3/8 inch / 35mm and larger connections related to higher PED requirements.

For countries where safety standards are not an indispensable part of the safety system Danfoss recommends the installer gets a third party approval of any system containing flammable refrigerant.

NOTE:

Please follow specific selection criteria stated in the datasheet for these particular refrigerants.

Media temperature

-40 – 105 °C, Max. 130 °C during defrosting

For R1234ze Media temperature: - 20 - 90 °C (105 °C for transient condition).

Product specification

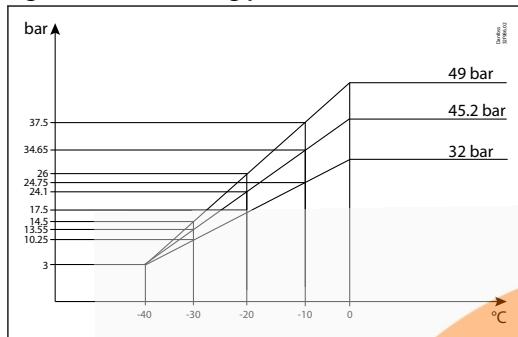

Technical data

Ambient temperature and enclosure for coil

See separate data sheet for solenoid and ATEX coils.

Max. working pressure

Figure 1: Max. working pressure in bar in relation to media temperature in °C.

⚠ WARNING:

Special note for EVR PED version: The EVR 2 - EVR 22 versions with solder connections and without manual stem can be applied to 49 bar MWP.

ℹ NOTE:

Excluded from this EVR 22 with connections 1 3/8 inch / 35 mm related to higher PED requirements.

Capacity

For K_v values refer to the tables in [Ordering](#).

The K_v value of the water flow in [m³/h] at a pressure drop across valve of 1 bar, $\rho = 1000 \text{ kg/m}^3$.

See extended capacity tables on [Coolselector®2](#).

Table 1: MOPD

EVR 25 NC	0.2	38	17
EVR 32 NC	0.2	38	17
EVR 40 NC	0.2	38	17

ℹ NOTE:

For higher MODP 12 W and 20 W AC coils are available on request

Valve selection based on capacity calculation

As for extended capacity calculations and valve selection based on capacities and refrigerants, please refer to Coolselector®2. Rated and extended capacities are calculated with the Coolselector®2 calculation engine to ARI standards with the ASEREP equations based on laboratory measurements of selected valves.

Rated liquid and suction vapor capacity is based on:

- vaporating temperature $t_e = -10 \text{ }^{\circ}\text{C}$
- liquid temperature ahead of valve $t_l = 25 \text{ }^{\circ}\text{C}$
- pressure drop in valve $\Delta p = 0.15 \text{ bar}$

Rated hot gas capacity is based on:

Solenoid valve, Type EVR 2 - EVR 40

- condensing temperature $t_c = 40 \text{ }^\circ\text{C}$
- pressure drop across valve $\Delta p = 0.8 \text{ bar}$
- hot gas temperature $t_h = 65 \text{ }^\circ\text{C}$
- subcooling of refrigerant $\Delta t_{\text{sub}} = 4 \text{ K}$

For other refrigerants, please refer to Coolselector®2

		[in]	[mm]			
EVR 6	AC / DC	3/8	10	No	1.0	032L8085
EVR 10	AC / DC	1/2	12	No	2.2	032L8090

Ordering EVR flange connection, Normally Closed (NC) - separate valve bodies

Figure 88: EVR 15 flange connection

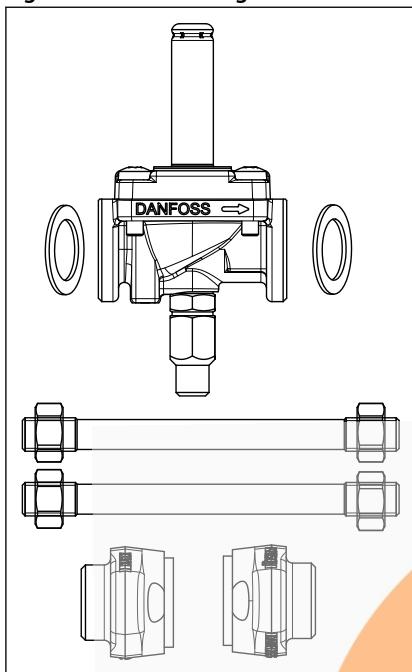

Table 25: EVR flange connection, Normally Closed (NC) - separate valve bodies

Type	Coil voltage	Connection	Manual operation	Code no.
EVR 15	AC / DC	Flanges	No	032L1224
	AC / DC	Flanges	Yes	032L1234
	AC / DC	Flanges	No	032L1243
	AC / DC	Flanges	Yes	032L1253

Table 26: Flange sets

Type	Connection size		Connection type			Code no.
	[in]	[mm]	Solder [in]	Solder [mm]	Weld [in]	
EVR 15	1/2	—	—	—	Yes	027N1115
	5/8	—	Yes	—	—	027L1117
	—	16	—	Yes	—	027L1116
	3/4	—	—	—	Yes	027N1120
	7/8	—	Yes	—	—	027L1123
	—	22	—	Yes	—	027L1122
EVR 20	3/4	—	—	—	Yes	027N1220
	7/8	—	Yes	—	—	027L1223
	—	22	—	Yes	—	027L1222
	1	—	—	—	Yes	027N1225
	1 1/8	—	Yes	—	—	027L1229
	—	28	—	Yes	—	027L1228

Example

EVR 15 without manual operation,

code no. **032L1224**

1/2 in weld flange set,

code no. **027N1115**

+ coil with terminal box, 220 V, 50 Hz,

code no. **018F6701**

Ordering EVRC solder connection, Normally Closed (NC) - separate valve bodies

Figure 89: EVRC solder connection (NC)

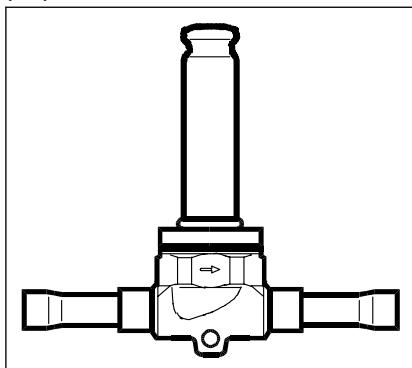

Table 27: EVRC solder connection, Normally Closed (NC)

Type		Coil voltage	Connection size [in]	Connection size [mm]	Manual operation	Kv value [m³/h]		Code no.
						Flow in arrow direction	Flow against arrow direction	
EVR 15		AC / DC	5/8	16	No	2.7	2.5	032L1255
EVR 20		AC / DC	7/8	22	No	3.6	5	032L1258

Ordering Flare nuts

Valve bodies for flare connection (NC) and (NO) are supplied without flare nuts.

Table 28: ordering Flare nuts

	Connection size			Code no.
	[in]	[mm]		
	1/4	6		011L1101
	3/8	10		011L1135
	1/2	12		011L1103
	5/8	16		011L1167

Certificates, declarations, and approvals

The list contains all certificates, declarations, and approvals for this product type. Individual code number may have some or all of these approvals, and certain local approvals may not appear on the list.

Some approvals may change over time. You can check the most current status at danfoss.com or contact your local Danfoss representative if you have any questions.

Table 29: Certificates, declarations, and approvals

Document name	Document type	Document topic	Approval authority
MH7648	Electrical - Safety Certificate		UL
TAA0000085 Rev. 2	Marine - Safety Certificate		DNV GL
RMRS 18.10006.262	Marine - Safety Certificate		RMRS
